Art Unit: 1641

1) Applicants are requested to provide an English translation of each of the Japanese patents cited in the corresponding International Preliminary Examination Report (Form PCT/IPEA/409, Box V, 2.) for this application, namely, JP 4-279664, JP 4-356527 and JP 4-232858.

- 2) Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-13 and 15-17, drawn to immunoassay solid phase carriers containing a silicon compound on the surface thereof, classified in class 436, subclasses 524 and 527.
- II. Claim 14, drawn to a solid phase for immunoassay which contains a hydrophobic material and blocking agent on the surface, classified in class 436, subclass 826; class 530, subclass 391.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the compositions of the different inventions require different sets of components. Invention I requires the use of a silicon compound of either Formula [I] or Formula [II] which is not required for the composition of Invention II. Invention II is directed to a solid phase which requires a "hydrophobic material" of <u>any</u> type and an "amphipathic substance" on the surface.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter requiring different fields of search and different patentability considerations, restriction for examination purposes as indicated is proper. A patentability determination for Invention I would require a determination of the novelty and unobviousness of the combination of "carrier" and compound of Formula [I] or Formula [II] while a patentability determination for Invention II would require a determination of the novelty and

Art Unit: 1641

unobviousness of the combination of "carrier", any "hydrophobic material" and "an amphipathic substance".

3) Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4) Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

5) Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mary (Molly) E. Ceperley whose telephone number is (571) 272-0813. The examiner can normally be reached from 8 a.m. to 4:30 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long V. Le, can be reached on (571) 272-0823. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
